ABOUT US

Carborundum Universal Limited (CUMI) is part of the US\$ 4.8 billion conglomerate Murugappa Group. The company pioneered the manufacture of Coated Abrasives and Bonded Abrasives in India. In addition, we also manufacture Super Abrasives, Super Refractories, Electro Minerals, Industrial Ceramics, Ceramic Fiber and Power Tools.

CUMI manufactures the complete range of Vitrified, Resinoid and Rubber Bonded Products for various industrial applications; Cylindrical Grinding, Centerless Grinding, Surface Grinding, Face Grinding and complete range of Coated Products: Abrasive Paper, Fibre Discs, Rolls, Flap Discs, Non-Woven and Flap Wheels.

Our products address various type of industries: Automobile OEM, Auto Components, Steel, Bearing, Foundry, General Engineering, Aerospace and Wood. We also have unique products for Ball Grinding, Ball Lapping, Roll Grinding etc.

CUMI's strong R&D and Application support team provide complete grinding system engineering and technical support to customers. With strategic global alliances, state of the art manufacturing facilities and sales support centres that span across North America, Europe, Russia, South Africa, India, China and Australia, CUMI has achieved a reputation for quality and innovation.

CUMI specializes and develops specific products to meet the requirements of customers and markets.

CUMI'S COATED ABRASIVES

CUMI's wide range of coated abrasives comprises of abrasive sheets, rolls, belts, fiber discs, flap discs, PSA, hook 'n loop, quick change discs, double sided discs, cartridge rolls, shaft mounted flap wheels & flap wheels.

With state-of-the art Peter Schwabe Maker, CUMI produces the widest range of high quality coated abrasive products for various applications meeting stringent customer demands.

COATED ABRASIVES

About Coated Abrasive

A coated abrasive is composed of three primary raw materials - abrasive grains, backing and bonding agent. The abrasive grains are primarily attached to a backing by means of a bonding agent. Coated abrasives are primarily used for heavy stock removal, grinding, de-burring, blending, cleaning, polishing & finishing operations.

STRUCTURE

1 BACKING

2 MAKER COAT

STRUCTURE OF COATED ABRASIVES

1. BACKING

Backing materials form the base of coated abrasives and anchor the abrasive grains with bonding agent. The various backings used in the manufacture of coated abrasives are as follows:
 Paper • Cloth • Vulcanized Fiber • Polyester film

1.1 PAPER:

Paper backings vary from A-weight (lightest, most flexible) to F-weight (heaviest, least flexible). Some specialty products include latex treated paper for flexibility and tear resistance. Paper backings are available in the forms of Abrasive sheets, rolls, belts, PSA, hook'n loop, double side discs and plain discs.

PAPER

MOST FLEXIBLE			LEAST FLEXIBLE		
A - weight (95 g/m ²)	B - weight (105 g/m ²)	C - weight (120 g/m ²)	D - weight (150 g/m ²)	E - weight (220 g/m ²)	F - weight (270 g/m ²)

1.2 CLOTH:

The cloth backings undergo a series of treatments to impart flexibility, stiffness and other characteristics depending on the application. CUMI's range of cloth backings are carefully chosen right from the weaving to processing, making them highly suitable for every application. Cloth backings are primarily classified by weight & yarn constructions and are available in Cotton, Polycotton and Polyester.

CLOTH

MOST FLEXIBLE		LEAST FLEXIBLE	
J-WEIGHT	X-WEIGHT	Y-WEIGHT	YY-WEIGHT

1.3 FIBER:

Vulcanized fiber backings are primarily used for the manufacture of jumbo based fiber discs, IDC based fiber discs and quick change discs. Fiber backings are chosen depending on the end application.

	RECOMMENDED FOR
0.95 mm	applications demanding heavy stock removal
0.85 mm	applications demanding medium - high pressure grinding (Exclusive for IDC)
0.80 mm	applications demanding medium - high pressure grinding
0.60 mm	finishing applications

Vulcanized fiber (cotton fibers which are chemically treated and then pressed under temperature and

STRUCTURE OF COATED ABRASIVES

2. MAKER COAT

The maker coat plays a crucial role of anchoring the abrasive grain to the backing firmly. The primarily used bonding agents are glue, semi-synthetic resin & synthetic resin which are chosen depending on the end application. Synthetic resins are used for heavy grinding operations & glue bond is preferred for hand sanding operations.

3. ABRASIVE GRAINS

Abrasive grains perform the material removal action supported by the backing and bonding agent.

Abrasive grains used in CUMI's coated abrasives are classified into 2 major variants:

- a) Natural abrasive grains
- b) Synthetic abrasive grains

NATURAL ABRASIVE GRAINS

i. Emery	Blocky shaped grain for hand sanding metal applications
ii. Garnet	Sharp edged soft grain for wood working applications
iii. Flint	Friable grain suitable for paint removal and hand sanding applications

SYNTHETIC ABRASIVE GRAINS

i. Eco Aluminium Oxide	Friable Aluminium Oxide grain ideal for light operations
ii. Brown Aluminium Oxide	Tough Aluminium Oxide grain suitable for both hand sanding and machine applications
iii. White Aluminium Oxide	Friable Aluminium Oxide grain for fast cutting action
iv. Premium Aluminium Oxide	Special treated Aluminium Oxide grain for superior performance
v Silicon Carbide	Hard and friable grain ideal for non-ferrous materials
vi. Zirconia alumina	Tough and hard premium abrasive grain for heavy duty grinding applications
vii Ceramic Aluminium Oxide	Micro-crystalline abrasive grain known for its high performance & unique fracture characteristics upon pressure

The important characteristics to be considered when choosing an abrasive grain are:

- Hardness
- Toughness
- Nature of fracture
- Grain shape and size

STRUCTURE OF COATED ABRASIVES

4. SIZER COAT

In this process, the bonding agent polymerizes along with the maker coat thereby reinforcing the abrasive grains for grinding operation. Special products for wood application incorporate anti-static material to prevent clogging

5. TOP COAT *OPTIONAL

This coating is applied over the sizer coat to impart special features to coated abrasives. The two major top coat variants are

- a.Anti-clogging coat : This comprises of a stearate coating which acts as a lubricant that prevents clogging by reducing friction thereby increasing life of the product
- b.Super-size coat : This coating comprises of a 'Fluorine' based grinding aid which prevents increase in temperature in Stainless steel & high alloy steels, rendering a cooler cutting action, increasing material removal rate and product life.

SUPER SIZE COAT

ANTI CLOGGING COAT

TYPES OF COATING

DEFINITION	DESCRIPTION	CODE
Close Coat	The backing surface is coated with 90-95% grit volume. It has got the longest life and best finish.	●
Semi-Open Coat	The backing surface is coated 50-75% grit volume. It has Anti-loading characteristics	○
Open Coat	The backing surface is coated with approx. 50% grit volume	○

SPECIALITY

ANTI-SLIP

Special anti-slip coating on the backing that minimizes slipping and aids fast & comfortable sanding.

WET / DRY

The Abrasive products that possess this specialty can be used in both wet and dry conditions.

ANTI-CLOG

Products with this pictogram consist of a stearate coating which acts as a lubricant minimizing the clogging effect during sanding that reduces friction thereby prolonging life.

LATEX

Products with this symbol consist of latex impregnated backing which offers greater amount of flexibility & tear resistance. Ideal for contour sanding.

SUPER SIZE

An additional coating of active fillers resists increase in temperature thereby providing a cooler cutting action. Highly recommended for Stainless Steel.

COATED ABRASIVES

SHEETS

CUMI offers wide range of products for hand sanding and for hand held power tools. Products are specially designed for particular work piece and mode of operation and are available for wet and dry sanding application. The products are supplied in cloth or paper backing for recommended application. CUMI also offers sheets and strips in wide range of designs with hole patterns for dust extraction.

ADVANTAGES OF CUMI SHEETS

- Fast cut rate
- Superior life
- Smooth finish
- Latex option for increased flexibility
- Stearate option for reduced loading

COATED ABRASIVES

ROLLS

CUMI's paper and cloth backed rolls find extensive use in cleaning, de-rusting and finishing various types of material. These rolls are manufactured using either Emery, Aluminium Oxide, Silicon Carbide grains with specially formulated resins and compatible backing suited for optimum performance in wood, leather, plastic, metal, rubber and glass industries. Coated abrasive rolls are designed for fast and easy sanding of various surfaces and can be torn to exact lengths as needed.

ADVANTAGES OF CUMI ROLLS

- Increased durability
- Adheres to contour sanding
- Good tearable properties
- Highly flexible products for special applications

BELTS

CUMI offers belts suitable for all sanding and grinding operations in wide range of sizes on cloth and paper backings. Special designs for customized applications i.e. metal working, wood working are available. Belts are made on backings with high tensile strength and optimum stretch resistance. CUMI supplies long, narrow and wide belts with various types of joints. The type of joint required depends on the work piece involved and machine used.

ADVANTAGES OF CUMI BELTS

- Wide range of backing from highly flexible to most sturdy
- Premium grains for enhanced performance
- Closely graded grains
- Modified bonds for improved grain retention
- Optional supersize coat for cooler cutting action

FIBER DISCS

CUMI's fiber discs are designed for applications ranging from heavy stock removal to finishing operations. Made from a vulcanized fiber backing and high performance bond system, these fiber discs are available in Aluminium Oxide, Silicon Carbide, Zirconia Alumina and Ceramic Aluminium Oxide variants.

The high quality fiber, available in different thickness has high mechanical strength and stable at high grinding temperatures. These discs are designed for high speed operations with hand held grinding machines – pneumatic, electrical.

Cumi's range of fiber discs are available in 3 different variants:

ROUND HOLE

SLIT HOLE

- a. IDC fiber discs
- b. Jumbo fiber discs

ADVANTAGES OF CUMI FIBER DISCS

- Special treated grains for maximum cut rate
- Imported vulcanized fiber for high strength
- High performance bond for longer life
- Active fillers for increased performance

IDC FIBER DISCS

CUMI is one of the few abrasive players to manufacture IDC range of fiber discs. IDC stands for Individual Disc Coating. As the name implies, these discs are individually coated with a superior bond and grain combination. Typically, in a jumbo fiber discs, the jumbo is punched to the required shape. Due to this action, the outer edges of the discs tend to get weaker resulting in premature grain shedding. By coating individually, grain adhesion on the periphery of the disc drastically reduces grain shedding resulting in high performance.

The advantages of IDC over conventional fiber discs are:

- a) Strong & uniform grain coating at the edges
- b) Reduced grain shedding
- c) Lower edge wear
- d) Improved grain retention for longer life

COATED ABRASIVES

A close-up photograph of a worker's hands wearing blue and white striped work gloves, using a blue and black angle grinder. The grinder is being used to grind a piece of dark metal, with bright orange and yellow sparks flying off to the left. The background is dark and out of focus.

COATED ABRASIVES

FLAP DISCS

FLAP DISCS

COATED ABRASIVES

FLAP DISCS

CUMI's flap disc are the one stop solution for grinding & polishing operations.

Typically, a flap disc is made of 3 components:

- Backing pad
- Bonding agent
- Abrasive cloth flaps.

The significance of flap disc is that the abrasive grains perform the cutting action. Once the grains are fully consumed, the work piece comes in contact with the cloth material which wears away giving rise to new abrasive material to perform the operation once again. For this reason, flap discs are preferred over fiber discs and D.C wheels

Flat flap disc for maximum contact surface for grinding.

Best suited for surface grinding applications.

Conical flap disc provides greater angles.

Best suited for grinding concave surfaces, difficult to reach areas.

BACKING PAD VARIANTS

FIBRE GLASS

Widely used variety in market

PLASTIC

Light weight & trimmable pads

ALUMINIUM

More sturdy & absorbs vibration

All of the above varieties are also available in 5/8-11" mounting hub for reduced change over time

DOUBLE SIDED DISCS

Double sided discs are a specialty in CUMI's range of coated abrasives. Designed for sanding on wooden floors, these discs provide exceptional performance and eliminate the need for a hardplate. Available in both paper and cloth backings. These are the preferred choice of customers over single sided discs.

Advantages of double sided discs:

- Abrasive grains on both sides of the disc
- Stiff design for extra rigidity
- Faster cutting action increasing productivity
- Reduction in changeover time
- Modified tough resin for extra durability on floor sanding operations

COATED ABRASIVES FLAP WHEEL

FLAP WHEEL

COATED ABRASIVES

FLAP WHEELS

Flap wheels are products with abrasive cloth flaps arranged around a central core. Flap wheels are ideal products for numerous applications ranging from stock removal to polishing. Known for their flexibility, they are preferred for sanding of contour edges and intricate shapes. Similar to flap disc, an important characteristic of flap wheel is its cloth which will wear away over usage giving rise to fresh abrasive grains.

ADVANTAGES OF CUMI FLAP WHEELS

- Premium grains for faster cutting action
- Special cloth treatment for excellent wear properties
- Active fillers for burn free operation
- Specific products for specific applications
- Customizable sizes based on requirement

APPLICATION GUIDE

BACKING	CODE	PRODUCT DESCRIPTION	COATING	MATERIAL				
				Steel	Stainless Steel	S.S Pipes	Profiled steel sections	Tools
CLOTH	XF 569	Premium AlO Flexible Abrasive Cloth	●	•	•	•	•	•
	XF 567	AlO Abrasive Cloth	●	•	•	•	•	•
	XG 542	AlO Abrasive Cloth	●	•	•	•	•	•
	XD 589	Zirconia Abrasive Cloth	●	•	•	•	•	•
	XD 589/ XD 549	Interleaved (AlO / Zirconia) Abrasive Cloth	○	•	•	•	•	•

● CLOSE COAT

○ SEMI-OPEN COAT

CLOTH BASED

Premium AIO Flexible Abrasive Cloth

XF 569

PROPERTIES

Backing	X - weight flexible cotton
Bond Type	Resin
Coating	Close coat
Grain	Premium Aluminium Oxide

APPLICATIONS

Steel • Stainless Steel • S.S Pipes • Profiled Steel Sections • Tools • Cutlery

FEATURES

For applications demanding high cut rate

MACHINE

FORM

GRIT RANGE

60 80 100 120 150 180 220 320 400 600

AIO Abrasive Cloth

XF 567

PROPERTIES

Backing	X - weight cotton
Bond Type	Resin
Coating	Close coat
Grain	Premium Aluminium Oxide

APPLICATIONS

Steel • Stainless Steel • S.S Pipes • Profiled Steel Sections • Tools • Cutlery

MACHINE

FORM

GRIT RANGE

36 50 60 80 100 120 150 180 220 320 400 600

FLAP WHEELS

COATED ABRASIVES

CLOTH BASED

AIO Abrasive Cloth

XG 542

PROPERTIES

Backing	X - weight cotton
Bond Type	Resin
Coating	Close coat
Grain	Aluminium Oxide

APPLICATIONS

Steel • Stainless Steel • S.S Pipes • Profiled
Steel Sections • Tools • Cutlery

FEATURES

For all purpose general grinding

GRIT RANGE

36 50 60 80 100 120 150 180 220 320 400 600 800 1000 1200

FLAP WHEELS

COATED ABRASIVES

CLOTH BASED

Zirconia Abrasive Cloth

XD 589

PROPERTIES

Backing	X - weight cotton
Bond Type	Resin
Coating	Close coat
Grain	Zirconia Alumina

APPLICATIONS

Steel • Stainless Steel • S.S Pipes • Profiled Steel Sections • Tools • Cutlery

MACHINE

FORM

FEATURES

For applications demanding high cut rate

GRIT RANGE
40 60 80 120

Interleaved (AlO / Zirconia) Cloth

XD 589/ XD 549

PROPERTIES

Backing	X - weight cotton
Bond Type	Resin
Coating	Semi - open coat
Grain	Zirconia Alumina / Aluminium Oxide

APPLICATIONS

Steel • Stainless Steel • S.S Pipes • Profiled Steel Sections • Tools • Cutlery

MACHINE

FORM

FEATURES

Combination flaps for high material removal at medium pressure

GRIT RANGE
40 60 80 120
